Specification :-

Scope of work carried out:-

Machine was completely stripped down and built from base :

The tank was thoroughly cleaned and drained off old debris accumulated over the years.All fittings/ pipes were flushed out thoroughly and seals replaced. The machine parts were repainted.

Mechanical Work : Toggle system checked and found within tolerance. Tie Bars &Bushes found satisfactory , no scratches on bars working area. Moving Platen &Fixed Platen geometry checked and skimmed where needed. Bed plates were reground and old shoes replaced with new ones.

Hydraulics : All base valves cleaned and replace old seals with new one. All Solenoid Valves &top valve replaced Cylinder and intensification unit cleaned and seals replaced. New Pump and Motor , Suction filter &Oil filter replaced base valves , top valves Intensification unit &cylinder resealed

Electrical : The machine has been rewired with New PLC Delta

Guarding : Guards are original Buhler and adjusted and mechanically secured. Operator side is pneumatic automatic &other side is manual. are all guards on machine , operator guard in automatic or manual
